

FOR PEOPLE & ASSETS ON THE MOVE

Q. WHAT IS ONROUTE?

A. Onroute is a highly versatile system with a wide range of management, safety and security uses. It is a powerful management tool for controlling divergence and it provides a good level of protection to people and assets in many situations of risk. Importantly, Onwatch can assist in providing reliable information, when certainty is key.

Q. CAN YOU GIVE ME SOME EXAMPLES OF USE?

A. Each unit is specifically programmed for your particular needs and the following examples are not automatically a feature of the system. For example, it can be used for the management or control of mobile units by location reporting, current and historical records of journeys, stops and starts, speed etc. Of course, it is dependant upon such data being available from the host unit.

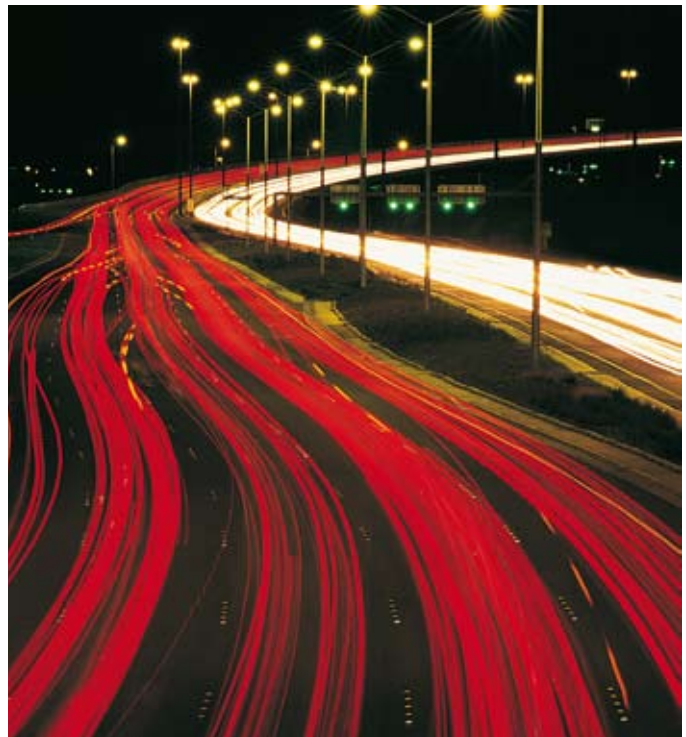

It can assist in the safety of lone workers as a locator and as a covert communication channel in the event of a crisis. A handheld transponder interacting with an embedded unit can provide a versatile status reporter for lone workers.

It is a cost effective aid to the security of any free moving asset.

Q. IN WHAT PARTICULAR CIRCUMSTANCES DO YOU THINK THAT ONROUTE IS MOST USEFUL?

A. Currently, there is a lot of concern about the vulnerability of lone workers and those working unsocial hours who are unable to avoid situations of risk. Those who regularly work in confrontational situations require a simple, but effective, means of dealing with threats and intimidation. Increasingly it is necessary to extend that comfort to others who may unexpectedly confront danger in the course of the daily life. Onroute keeps them invisibly in touch. It is a considerable comfort for those at risk to know that their location and status is constantly logged and assistance can be provided at the push of a button.

Health and Safety issues have never been more important and adequate provision for the unexpected, as well as the predictable, can be overly expensive. Awareness of illegal or ill advised practices may never come to the attention of those with responsibility for compliance without some form of check of those at risk. With Onroute, an effective checking system can be deployed in the most demanding of conditions.

Onroute can be effectively implemented in a wide range of situations. By definition it is an electronic device, but when applied to difficult and trying circumstances, it becomes a lifeline to the user, while acting as a powerful management tool for others.

By carefully investigating your needs and concerns, together with their own experience gained from working with other similar users, our account management team can build up a combination of the most suitable equipment specification. They can activate the most appropriate capabilities of the equipment and generate the information outputs required to activate a response in keeping with the nature of the threat. Options for monitoring include the supply of the full suite of software for in-house management, a full off-site management service via the Onwatch monitoring station, status updates via the Internet or a combination to suit. Pilot schemes are available for larger users.
